THE REPORT

SUMMER 2022

*Public Protection
through fair and
impartial application
and enforcement of
practice acts*

Message From the Board of Medicine:

WHAT IS THE LATEST ON PRN? THE PHYSICIAN-RECOVERY NETWORK

Michele Chadwick, BBA, MPA—Board Member

What is the PRN? The Physician-Recovery Network is a confidential recovery program offered to those licensed under the Idaho Board of Medicine (IBOM). The program’s purpose is to support professionals in recognizing their substance use disorder, identify and facilitate treatment, and provide long-term case management. The Idaho Medical Association (IMA) and the IBOM have partnered over the past 30 or so years in providing physicians, physician assistants, athletic trainers, respiratory therapists, dieticians, and now naturopathic medical doctors, with a supportive option for substance use treatment. The program has two different “entry” points. The first being a voluntary referral in which the Board of Medicine is not involved and are not made aware of the individuals who participate in the PRN. The second entry point is for those individuals who have gone through the disciplinary process of the IBOM and are participating as a condition of their licensure.

The Physician Recovery Network (PRN) was initially created by the IMA and has enjoyed financial support from the State of Idaho via the IBOM for several years. The IBOM has been working on a process and pathway to update and strengthen the current PRN program. There have been many different stops and starts during this time and we wanted to update our licensees as to the status. In compliance with state law relating to contracts and in collaboration with the Idaho Department of Purchasing, a new Request for Proposal (RFP) for recovery services was initiated. The Division of Occupational and Professional Licenses (DOPL), of which the Board of Medicine is a part, opted to use an “Invitation to Negotiate” process to ensure the scope of work provides the level of service expected for participating health care professionals.

The proposals submitted are currently under review and the state plans to award in the near future. In addition to the current Boards that have a recovery program, it is planned to extend access to a recovery program to all respective licensees and registrants of the health professions bureau. We hope that resources relating to mental health, burnout, and an information library will be added to benefit you. Our goal is to provide resources that you will want to utilize if a need should arise.

Continued on page 2

The recent data for substance use disorder is powerful.

- In the general population, substance use disorders and other psychiatric illnesses are common.
- More than 10 percent of Americans will develop an addictive disorder in their lifetime, representing over 30 million people.
- In the physician population, at least 10 percent of physicians will develop an addictive disorder over the course of their career, and approximately one-third of physicians will have a condition that could impact their ability to practice safely at some point in their career.

And here's some data about the current program

- 66.7% of participants currently enrolled have a chemical dependence diagnosis
- 33.3% of participants currently enrolled are dual diagnosis (substance use and mental health)

Need help or know someone who might? Here's how to get help if needed:

IDAHO

DIVISION OF OCCUPATIONAL & PROFESSIONAL LICENSES

RUSSELL S. BARRON – ADMINISTRATOR
NICKI CHOPSKI – HEALTH PROFESSIONS BUREAU CHIEF

Idaho Telehealth Access Act

COVID-19 Guidance

The state of Idaho is under a federal declaration of emergency due to the ongoing occurrence and imminent threat to public health and safety arising from the effects of COVID-19. Pursuant to the emergency, the Division of Occupational and Professional Licenses (DOPL) will assist the current status of healthcare professional capacity by exercising enforcement discretion to provisions of the Telehealth Access Act to restore allowances from 2020. Any healthcare professional may provide telehealth services in or into Idaho, so long as the healthcare professional is licensed or registered and in good standing with another U.S. state or jurisdiction and acting in good faith.

A healthcare professional providing telehealth services will consider the following provisions prior to providing patient care:

- A healthcare professional providing telehealth services in or into Idaho must be licensed or registered in any U.S. state or jurisdiction, and in good standing with no active or pending disciplinary action;
- A healthcare professional providing telehealth services in or into Idaho must act in good faith, exercise reasonable care, and follow applicable federal regulations;
- A healthcare professional providing telehealth services in or into Idaho must possess the necessary education, training, and experience for the services being provided; and
- A healthcare professional providing telehealth services in or into Idaho must use sufficient technology to establish a patient-provider relationship for the services being provided.

The Division enforcement discretion is in place until January 1, 2023, unless extended by DOPL announcement. To ensure continuity of patient care after the waiver ends, healthcare professionals providing telehealth services should pursue Idaho licensure or prepare a transition plan for patient care.

LEGISLATIVE UPDATE

As the 2022 Legislative session adjourned Sine Die on 3/31/22. This is a summary of bills passed that may affect those licensed under the Board of Medicine.

[Senate Bill 1233](#)

Allows Division of Occupational and Professional Licenses' staff to share investigatory information regarding licensees with other boards and commissions to create efficiency within Division investigations. The bill ensures all complaints, investigations, and informal proceeding records are exempt from disclosure under the Public Records Act.

[House Bill 612](#)

Consistent with the Occupational Licensing Reform Act, this legislation allows an Idaho licensing authority to consider and grant a request for the expungement of disciplinary action previously imposed on a person's occupational license. The bill requires a licensing authority, upon request, to expunge any prior disciplinary action based on failure to timely renew a license or failure to complete required continuing education. The bill removes all requirements for a licensee to report expunged disciplinary action on future licensing or renewal applications in Idaho. The bill does not apply to civil or criminal convictions.

[House Bill 629](#)

This legislation establishes an independent office of Administrative Hearings, and otherwise provides for the independence and impartiality of hearing officers in the Administrative Hearing Act contested case proceedings in accordance with the recommendations in the Administration Hearing Officer Interim Committee and the "Bias in Hearing" findings by the Office of Performance Evaluation.

[Senate Bill 1368](#)

This legislation is a terminology clean-up bill consistent with the Occupational Licensing Reform Act passed by the Idaho legislature in 2020. The reform bill created a new process for how licensing boards consider and evaluate an applicant's past criminal conviction in Idaho Code § 67, Chapter 94. The 2020 bill removed licensure denials on the basis of vague or generic terminology related to a criminal conviction, including "moral turpitude" or "moral character." The bill reduces confusion and conflict in law by updating all Idaho Division of Occupational and Professional Licensing boards and commission statute references in alignment with Idaho Code § 67, Chapter 94. The bill will create clear direction for our licensing boards when considering applications.

Legislative Update Continued:

[House Bill 446](#)

Amends the definition of “marijuana” to exclude Nabiximols in a drug product form approved by the FDA. Nabiximol is an oromucosal spray used in multiple sclerosis. Once Nabiximols get FDA approval and is scheduled by the DEA, it will become available in Idaho via valid prescription.

Helpful Hints for access to Prescription Drug Monitoring Program (PDMP)

I’m using Safari as my browser and cannot access my Prescriber Report.

Safari 13.1 web browser, has default permissions implemented by Apple to block all third party cookies. If a prescriber attempts to access their prescriber report using Safari 13.1 as their web browser, the user will be presented a message, “Safari_Blocked”. There is no known workaround for viewing Prescriber Reports within PMP AWARe using the Safari 13.1 web browser at the time of this publication.

When I click on the Prescriber Report link in PMP AWARe I’m prompted to log into Appriss Health, but I don’t have an Appriss Health log in and cannot view my Prescriber Report.

The user should update their web browser settings to allow third party cookies or allow an exception for [*].pmpaware.net. After updating third party cookie settings we recommended the user clear their cache before additional attempts to view their Prescriber Report dashboard.

Beware of Board Impostors

There have been several attempts to impersonate state employees from the Health Profession Boards within the Division of Occupational and Professional Licenses (DOPL). These scams have ranged from phone calls, letters, and even faxes. The licensees targeted in most common schemes are those who hold a healthcare license and a DEA registration.

The imposters send out “official” letters that look like they are from the State Boards requesting funds or else licenses will be suspended. They have even gone to the extent of providing the actual license number to individuals.

Some attempts have involved claiming to be a “Chief Officer of Idaho” and an ongoing investigation requiring the licensee to provide information. Scammers even went to the extent of providing badge numbers, case numbers, and referencing to statutes.

Here are some actual examples from Idaho Licensees of how detailed the imposters can be:

Scenario #1:

Licensee was contacted by an individual impersonating investigator from the DOPL stating that the pharmacist license had been suspended due to an investigation which involved the licensee. DOPL impersonator proceeded to ask for payment (wiring/gift cards) which would allow the licensee to continue working during the investigation.

Scenario #2:

Recently in February, a call was received by a licensee from the “State Board” about illegal activities with their license. The caller ID showed “ID State Gov.” The person claimed suspicious activity with licensee, and they were under investigation. Licensee was then transferred to the investigator named “Mike Moore.” He went on to state there was an investigation for drug trafficking with licensee and had their name, license number, and NPI number (Remember this is public information). “Investigator” said to keep this quiet because speaking to anyone would disrupt their investigation. He claimed licensee could be held liable. “Mr. Moore” requested a personal number so the line could not be tapped. The “investigator” gave the actual number to the Board to call back.

Scenario #3:

The phone call started by asking me if the person was **** and if their license number was ***, which was correct. The female then asked if the licensee was aware of the drug trafficking investigation happening under their name. Imposter then transferred person to the investigational officer “Jeffrey Sallet”, supposed Chief Officer of Idaho.

“Mr. Sallett” proceeded to relay to his phone extension of 208-334-2356 x101, Badge ID: DZ1951, and case number: CP20891R. He stated that licensee would not be allowed to disclose any of the following information to a third party since it would jeopardize the evidence and allow the culprit to get away.

Beware of Board Impostors (cont)

He said the licensee had the right to hire a criminal attorney and should proceed to the closest UPS store to receive a notice of license suspension since licensee did not have access to a fax machine. He kept the licensee on the line while they drove to the UPS store. The fax included was received with actual NPI number, but licensee noticed there were slight differences between this fax and the other official Board papers completed/received in the past. Note: No star in the seal between "State" and "OF" and no PO BOX contact listed.

The fax stated their license was suspended as of that day. "Mr. Sallet" said he would speak to the FBI for a temporary exemption to unfreeze licensee accounts and a temporary approval to practice since licensee worked in a hospital and need to report to shifts. Instructions were also given not to discuss any case information with employer.

Imposter then talked about two federal rights:

- 1) Hire a criminal attorney to fight my case in court. Until the case is over, licensee would not be allowed to practice. The consequences were that their license would remain suspended, an arrest warrant would be issued, passport revoked, and finances would be frozen if not innocent.
- 2) If licensee were to cooperate with the board for investigation to the FBI, they could help to prove the wrongful use of identity and have license cleared.

He then listed some people of interest that could have framed licensee, and of the seven people listed, two names were recognized.

Licensee was put on a three-way call with the FBI to plead their case. The phone connected to "FBI agent: Oscar Garcia". They asked about why licensee was cooperating and would they to sign some federal bond statement saying they will not leave the country. If they did not comply, they would be charged with \$500,000. They mentioned something about a security deposit to ensure licensee was cooperating but did not state the price.

Since the phone call dropped several times, they called back with the same number disguised from the Board and continue to call. During this time, licensee proceeded to call the real board number and was in touch with a helpful individual who confirmed had no issues regarding their license.

Red Flags in scenarios:

- Investigators within DOPL do not have badge numbers. They have employee ID badges.
- If you are involved in an investigation, DOPL will send a certified letter to notify you.
- Payment is never done through wiring/gift cards.
- DOPL would not keep you on the phone while you drove to another location to receive a fax.

Here are some suggestions from an article the National Council of State Boards of Nursing (NCSBN) released entitled, "Be on High Alert for Spear Phishing Scams."

1. If you receive a phone call, never give out your personal information during the call. Hang up and then only call a number back that you have determined is legitimate through your research.
2. Never reply to a text message asking for you to call the number provided in the text to discuss your imminent "suspension or revocation of your license."
3. Never reply to an email asking for personal information.
4. Never call a number provided to you in a suspect letter or email.
5. Use your own verified numbers for contacting the Board of Medicine.
6. Be vigilant! Do not discard or ignore such communication from scammers, but rather call and/or connect with the Board of Medicine to report the scam.

[NCSBNAAlert-SpearPhishing-final.pdf](#)

If you are ever questioning such phone calls, letters, or faxes, please call or email DOPL directly from a number found on our website. Always verify suspicious communication. The correct Idaho Board of Medicine contact information:
